

Slide notes: In this tutorial, we are working with Asset Re-Valuation and we will explore the step where we import or upload the new Asset Values.

Slide notes: At the Take On screen, let us first consider the data layout that is expected.

Slide notes: As with most data imports, we can upload the data from a Spread Sheet that has been saved as a CSV file, or simply from a TXT file that has text data but with the values separated by COMMA.

Slide notes: There is also further explanation of the expected data and what will happen in certain circumstances. This is useful to read before using it for the first time.

Slide notes: The next step will be to select and import the target file that has the new Asset Values. But before we do that, let us show that we have such a file ready on the BRIDGE folder.

Slide notes: And here we can see the file that is ready and waiting on the BRIDGE folder. That is the only folder from which we can import.
