Slide notes

We will be looking at a Tag Template that we can use to retrieve an Alpha Value from a Direct Data Source. Rather than by name, this Template retrieves the data by Field Number.In the Invoice Report that we show here, there is a Unit, but we are interested in the Values outside of the Unit, because those are the Values that we address by the Alpha and Numeric from Direct Data Source Templates.

Slide notes

We note that we can use this method only when we have a Direct Data source listed, and more often than not, when we use the Field number method as opposed to the Name method, then it is a data record specially prepared for the Report.
