Slide notes: The concept of Period Mapping is not difficult to understand. IES has the ability to present Financial, Physical and other indicators on many kinds of Accounts for any Period of the User's choosing. For example, even though it may be August 2010 at the moment, we can choose on a Report to show the values as if it was actually May 2009, or for any other selected Period.

Slide notes: Here is a preview of a Balance Sheet Layout example, and in this example we compare the Balance Sheet values for This Year with Last Year. What the meaning of This Year and Last Year will be. All depends on what the User chooses when performing the Report, and that is why we have Tag 2 for This Year and Tag 3 for Last Year, as we do not know in advance what these Periods will be, and the User is going to select it when performing the Balance Sheet Report.

Slide notes: As a matter of fact, Tag 5 will do exactly the same thing as Tag 4, and the only difference between the 2 is that Tag 5 will 'map' to the Period that the User selects as Last Year. So that is what Period Mapping is all about - it is the ability to lock into a Period view of a certain Value selection.

TOTAL EQUITY AND LIABILITIES	10028	100291	

Slide notes: Now, to understand this clearly, we can have another look at Tag 4 for Total Fixed Asset Value at a selected Period, and then compare it with Tag 5. The only difference between the 2 Templates will be the Period Mapping setting because Tag 4 is for This Year and Tag 5 is for Last Year.
