	To build a NEW Query, just choose a Descr. Data Source and Data Selector, then choose SELECT QUERY FIELDS.	Query Fields must be selected with the SELECT QUERY FIELDS button, but unwanted fields can be removed from the grid with the DEL key	You may USE another User's Query, but you cannot change it. However, you can use COPY to make your own version

## Slide notes

Query Builder, also called Query Writer, is an IES Report Writer that will produce output to a spreadsheet.

### Slide notes

A Data Query operates on a Data Source, also called a Filename, and uses a Data Selector that will apply the criteria as to which records to select.

### Slide notes

The Query Fields describe data in the File, and each Field will result in a column in the spreadsheet.

#### **Slide notes**

Period Mapping is an advanced feature that is available for all Financial Files in IES. When a Query operates on such a File, then we may also choose which Periods to map. In other words, for Balances and other Period linked information, we can choose the Period window at which to see the result.
